

**CHILD SEAT LINKING DEVICE IN A MOTOR  
VEHICLE WITH TENSION INDICATOR, AND  
CORRESPONDING CHILD SEAT**

ABSTRACT OF THE DISCLOSURE

5        A child seat linking device with a first portion  
of strap in a motor vehicle is characterized in that  
it comprises two mutually moveable linking components  
between an idle position and a working position  
adopted when the first portion of strap is taut. A  
10 return device tends to return the linking components  
to the idle position. A tension indicator  
distinguishes whether the linking device is in the  
idle position or in the working position.
